1. Application Objective

TalentAI is an AI-enabled recruitment platform that helps organizations manage the recruitment lifecycle from job creation through candidate hiring, while using AI to assist recruiters in sourcing, screening, matching, evaluating, and shortlisting candidates.

Primary Users

- System Administrator
- Recruiter / Talent Acquisition Specialist
- Hiring Manager
- Interviewer
- Candidate

2. High-Level Recruitment Lifecycle

AI capabilities should assist decision-making rather than automatically making employment decisions unless the business explicitly defines otherwise.

3. Functional Requirements

FR-01 User Management

The system shall allow administrators to:

- Create users.
- Update users.
- Activate/deactivate users.
- Assign roles.
- Manage user permissions.
- Reset user access.
- View user activity.
- Maintain organizational structure.

Roles

Role	Primary Responsibility
Administrator	System and user administration
Recruiter	Manage recruitment
Hiring Manager	Review candidates and make hiring decisions
Interviewer	Conduct interviews and provide evaluations
Candidate	Search/apply/manage applications

4. Job / Requisition Management

FR-02 Create Job Requisition

The recruiter shall be able to create a job requisition containing:

- Job title
- Department
- Location
- Employment type
- Number of positions
- Job description
- Required skills
- Preferred skills
- Minimum experience

- Maximum experience
- Educational qualifications
- Certifications
- Salary range
- Work arrangement
- Hiring manager
- Recruiter
- Target hiring date
- Job priority

Example

Job: Senior Java Developer

Required:

- Java
- Spring Boot
- REST APIs
- Microservices
- SQL

Experience:

5-8 years

Preferred:

- AWS
- Kafka
- Docker

5. Job Approval

FR-03 Requisition Approval

The system shall support an approval workflow before a job is published.

Example

```
Recruiter
↓
Create Requisition
↓
Hiring Manager
↓
Approve
↓
HR / Management
```

```
graph TD; A[Approve] --> B[Publish]
```

The system shall maintain the approval history.

6. Job Publishing

FR-04 Publish Job

The recruiter shall be able to publish an approved job to configured recruitment channels.

Potential Channels

- TalentAI career portal
- Company career website
- Job boards
- LinkedIn
- Other configured recruitment platforms

The system shall track the source through which each candidate applied.

7. Candidate Management

FR-05 Candidate Registration

Candidates shall be able to create a profile containing:

- Name
- Contact information
- Location
- Work experience
- Education
- Skills
- Certifications
- Employment history
- Resume
- Portfolio
- LinkedIn/profile links

- Preferred job location
- Salary expectations
- Notice period

8. Resume Management

FR-06 Resume Upload

The candidate shall be able to upload a resume.

Supported Formats

- PDF
- DOC
- DOCX

The system shall store the original resume.

9. AI Resume Parsing

FR-07 Resume Extraction

TalentAI shall use AI/NLP capabilities to extract structured information from resumes.

Example

The system should identify:

- Technical skills
- Functional skills
- Years of experience

- Job titles
- Employers
- Education
- Certifications
- Projects
- Industry experience

The system should retain the extracted information separately from the original resume.

10. Candidate-to-Job Matching

FR-08 AI Candidate Matching

The system shall evaluate candidate profiles against job requirements.

The matching engine should consider:

- Required skills
- Preferred skills
- Experience
- Education
- Certifications
- Job titles
- Industry experience
- Location
- Other configurable criteria

The system shall generate a match score.

Example

Candidate: Rahul

Overall Match: 87%

Skills	92%
Experience	90%
Education	100%
Location	80%
Preferred Skills	70%

11. Match Explanation

FR-09 AI Match Explanation

The system shall provide an explanation for the candidate's match score.

Example

```
Strong matches:  
✓ Java  
✓ Spring Boot  
✓ REST API  
✓ Microservices  
✓ 6 years experience  
  
Partial matches:  
~ AWS - basic experience  
  
Missing:  
X Kafka
```

This is important because recruiters should not receive a score without understanding its basis.

12. Candidate Screening

FR-10 Screening Questions

Recruiters shall be able to configure screening questions for a job.

Question types may include:

- Yes/No
- Multiple choice
- Free text
- Numeric
- Experience
- Eligibility

Example

```
Are you willing to relocate to Bangalore?
```

The system shall record candidate responses.

13. AI Candidate Screening

FR-11 AI-Assisted Screening

The system may analyze candidate responses and profile information against configured job criteria.

The system shall distinguish between:

- Required criteria
- Preferred criteria
- Disqualifying criteria

Example

```
Required:
Java experience ≥ 5 years

Candidate:
Java experience = 6 years

Result:
PASS
```

14. Candidate Shortlisting

FR-12 Shortlist Candidates

Recruiters shall be able to:

- View matched candidates.
- Sort candidates.
- Filter candidates.
- Shortlist candidates.
- Reject candidates.
- Move candidates between recruitment stages.

Example

```
Applied
↓
AI Screened
↓
Shortlisted
↓
Recruiter Review
↓
Hiring Manager Review
```

15. Candidate Search

FR-13 Candidate Search

Recruiters shall be able to search candidates using:

- Name
- Skills
- Experience
- Location
- Education
- Job title
- Match score
- Availability
- Recruitment status

The system should support semantic/AI-powered search.

Example

```
"Find Java developers with microservices experience and 5+ years of experience."
```

16. Candidate Pipeline

FR-14 Recruitment Pipeline

The system shall provide a visual candidate pipeline.

```
Applied
  120
  ↓
AI Screened
  80
  ↓
Shortlisted
  30
  ↓
Interview
  15
  ↓
Offer
  5
  ↓
Hired
  3
```

Recruiters shall be able to move candidates between stages subject to configured rules.

17. Interview Management

FR-15 Schedule Interview

Recruiters shall be able to:

- Select candidate.
- Select interview type.
- Select interviewer.
- Select date/time.
- Send interview invitation.
- Reschedule interview.
- Cancel interview.

Interview Types May Include

- Phone screening
- Technical interview
- HR interview
- Managerial interview
- Panel interview

18. Interview Evaluation

FR-16 Interview Feedback

Interviewers shall be able to submit structured feedback.

Example

Evaluation Area	Rating
Technical Skills	4/5
Communication	4/5
Problem Solving	5/5
Domain Knowledge	3/5

The interviewer shall provide comments and a recommendation.

Possible Recommendations

- Strong Hire
- Hire
- Hold
- Reject

19. AI Interview Assistance

FR-17 AI Interview Support

The system may provide interviewers with suggested questions based on:

- Job requirements
- Candidate experience
- Candidate skills
- Candidate projects

Example

```
Candidate claims:  
"Designed Kafka-based event processing."  
  
AI suggested question:  
"How did you handle message ordering and  
duplicate events in your Kafka architecture?"
```

The AI should assist the interviewer rather than independently determining the hiring outcome.

20. Hiring Decision

FR-18 Candidate Decision

The hiring manager/recruiter shall be able to make a final decision.

Possible Outcomes

- Selected
- Rejected
- On Hold

The system shall record:

- Decision

- Decision maker
- Date/time
- Reason/comments

21. Offer Management

FR-19 Generate Offer

For selected candidates, the system shall support:

- Offer creation
- Compensation details
- Joining date
- Employment conditions
- Offer document generation
- Offer submission

22. Candidate Offer Response

FR-20 Offer Acceptance

Candidates shall be able to:

- View offer.
- Accept offer.
- Reject offer.

The system shall record the candidate's response and timestamp.

23. Notifications

FR-21 Notifications

The system shall generate notifications for important recruitment events.

Examples

```
Candidate applied
↓
Recruiter notification
Candidate shortlisted
```

```

      ↓
Candidate notification
Interview scheduled
      ↓
Candidate + Interviewer notification
Candidate selected
      ↓
Candidate notification

```

Channels may include:

- Email
- In-app notification
- SMS
- Configurable messaging channels

24. Recruitment Analytics

FR-22 Recruitment Dashboard

The recruiter shall be able to view:

- Open positions
- Applications
- Candidates screened
- Candidates shortlisted
- Interviews
- Offers
- Hires
- Rejections
- Time-to-hire
- Time-to-fill
- Source effectiveness

Example

Open Positions	25
Applications	1,250
AI Shortlisted	180
Interviews	72
Offers	18

Hires	12
-------	----

25. AI Analytics

FR-23 AI Recruitment Insights

The system may provide insights such as:

- Jobs with insufficient candidates
- Skills with low candidate availability
- Candidates with high match scores
- Recruitment bottlenecks
- Sources producing high-quality candidates
- Jobs taking longer than expected to fill

26. Audit Trail

FR-24 Audit Logging

The system shall record significant activities.

Example

Who: Recruiter A
Action: Shortlisted Candidate
Candidate: C12345
Date: 27-Aug-2026 10:32 AM

Audit events should include:

- User
- Action
- Entity
- Previous value
- New value
- Timestamp

27. Business Rules

This is where the earlier discussion becomes important.

Requirements describe what the system needs to do. Business rules describe constraints governing those requirements.

For TalentAI, examples would be:

Rule ID	Business Rule
BR-01	A candidate cannot be shortlisted unless all mandatory eligibility criteria are satisfied.
BR-02	Only an authorized recruiter or hiring manager can change the recruitment stage.
BR-03	A requisition must be approved before it can be published.
BR-04	Only active users can perform recruitment activities.
BR-05	A candidate cannot be scheduled for an interview unless the candidate is in an eligible recruitment stage.
BR-06	Only authorized users can view candidate personally identifiable information.
BR-07	AI match scores must not be treated as the sole basis for an employment decision.
BR-08	Mandatory job criteria shall have greater weight than preferred criteria.

28. Non-Functional Requirements

These should be specified separately from functional requirements.

NFR-01 Security

The system shall provide:

- Authentication
- Role-based access control
- Authorization
- Encryption in transit
- Encryption at rest
- Secure password management
- Audit logging

NFR-02 Performance

Example targets:

- Standard API response: ≤ 2 seconds for 95% of requests

- Candidate search: ≤ 3 seconds
- Resume processing: configurable SLA depending on document size

These are examples, not requirements you should accept without business confirmation.

NFR-03 Availability

The application shall meet an agreed availability target, for example:

- 99.9% monthly availability.

NFR-04 Scalability

The system shall support growth in:

- Candidates
- Job requisitions
- Resume documents
- Concurrent recruiters
- AI processing requests

NFR-05 Privacy

Candidate information shall be protected according to applicable privacy and employment regulations.

NFR-06 AI Explainability

AI-generated recommendations should provide sufficient reasoning/evidence for recruiter review.

29. External Integrations

Potential integrations include:

Each integration should eventually have its own integration requirements.

30. Core Domain Entities

At the requirements level, the major business entities are:

This is where Domain-Driven Design can later become useful: these requirements can be decomposed into business domains such as Recruitment, Candidate Management, Job Management, Interview Management, Offer Management and AI Assessment.

31. Requirement Traceability

As a senior BA, requirements should not stop at a list of items. Traceability should be established:

Example

```

Business Requirement
"Recruiters need to identify suitable candidates efficiently."
    ↓
FR
"System shall match candidates against job requirements."
    ↓
BR
"Mandatory skills must be satisfied."
    ↓
User Story
"As a recruiter, I want to see candidates ranked
by job-match score so that I can prioritize my review."
    ↓
Acceptance Criteria
"Given a candidate has all mandatory skills,
when the matching engine evaluates the candidate,
then the candidate shall be classified as eligible."
    ↓
Test Case
Verify candidate with all mandatory skills
receives eligible status.

```

Recommended Next BA Step

These requirements should not be immediately converted into user stories. First, they should be refined into a proper TalentAI Requirements Specification with:

- Business requirements
- Stakeholders and personas
- Recruitment process / AS-IS and TO-BE
- Functional requirements
- Business rules
- AI-specific requirements
- Non-functional requirements
- Data requirements
- Integration requirements
- Security/privacy requirements
- Assumptions
- Dependencies
- Out of scope
- Open questions / ambiguities
- Traceability matrix

That structure provides a much stronger foundation for subsequently producing user stories → acceptance criteria → API requirements → integration test cases.
